call Story_asm:

56.890 light years into outer space...

You start off as Michael Collins, an astronaut trying to find the missing starships, which are scattered all over the universe.

These contain resources which belong to a specific planet fulfilled with living beings of a kind. They are in need of these resources in order to survive and keep evolving.

Be careful though, there are some evil beings and obstacles throughout the map which will be deadly if you can't manage to surpass.

Are you able to recover the starships and gain the trust of each faction?

I'm sure you are... or maybe... not.

call Mechanics_asm:

-Character

You will be controlling the astronaut, Michael Collins, throughout the game.

-Asteroids

These will appear on the levels and will be an obstacle to surpass for you.

-Evil beings

These will spawn on higher levels and will chase you as soon as you find a starship stacked with resources. Don't get caught up by those, take care.

-Starships with resources

Those are the objectives you are thriving for. Gather and return them and you will rise as an honorable member of a specific faction

-Planets

Places you have to turn in the starships stacked with resources.
There will be one kind of a planet for each starship.

-Different maps

This game is progressive.
Different maps for each level.
Progressive difficulty for each level.

call Controls_asm:
